

COMPUTER NETWORKS

EXP - 3

TITLE: Configure default Route, static route to the Router

Observation: After configuration of static routing, the ① two PCs of two different router networks are able to transfer / transmit the packets using the ping command.

Output:

Router # show ip route

C 10.0.0.0/8 is directly connected, FastEthernet0/0

S ~~20.0.0.0/8~~ [1/0] via 30.0.0.2

C ~~30.0.0.0/8~~ is directly connected, Serial 2/0

23/10/24

Configure default route, static route to the Router.

Aim: To configure a default route and static route to a router in a network and verify connectivity.

Topology:

Router 0 and Router 2 are connected serially via Router 1 using Serial DCE cable. PC 0 is connected to Router 0 using Copper Cross-over, similarly PC 1 is connected to Router 2.

Procedure:

1. Configure the Fast Ethernet connection between the PC and the router with appropriate IP addresses.
2. For Router 1 set the static routing connectivity by following the commands.

Router # config-t

```
Router(Config)# ip route 40.0.0.0 255.0.0.0 30.0.0.2
```

```
Router(Config)# ip route 10.0.0.0 255.0.0.0 40.0.0.1
```

These commands will set the static routing of the Router #1.

3. Set the default Routing of Router 0 and Router 2.

- Open CLI on Router 0

```
Router# config-t
```

```
Router(Config)# ip route 0.0.0.0 0.0.0.0 20.0.0.2
```

~~Router~~

- Open CLI on Router 2

```
Router# config-t
```

```
Router(Config)# ip route 0.0.0.0 0.0.0.0 30.0.0.1
```

When the network and the subnet mask are set as ~~255~~ 0.0.0.0. Any unknown network will be transferred to the next hop address mentioned.

Observation:

After configuring the default route, PC0 could communicate with external networks, including PC1. The static route ensured that packets ~~are~~ followed the specified path as given in the static routing.

Output:

Router 1: # show ip route

```
S 10.0.0.0/8 [1/0] via 20.0.0.1
```

```
C 20.0.0.0/8 is directly connected, Serial 2/0
```

```
C 30.0.0.0/8 is directly connected, Serial 3/0
```

```
S 40.0.0.0/8 [1/0] via 30.0.0.2
```

Router 0: # show ip route

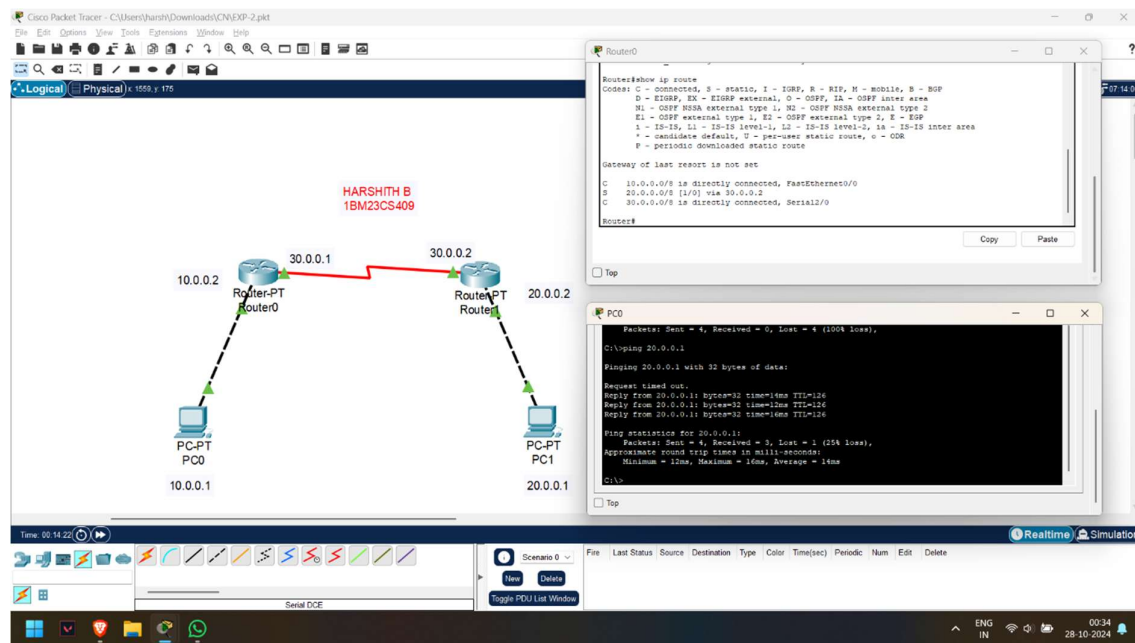

C 10.0.0.0/8 is directly connected, FastEthernet0/0
C 20.0.0.0/8 is directly connected, Serial 2/0
S* 0.0.0.0/8 [1/0] via 20.0.0.2

Router 2: # show ip route

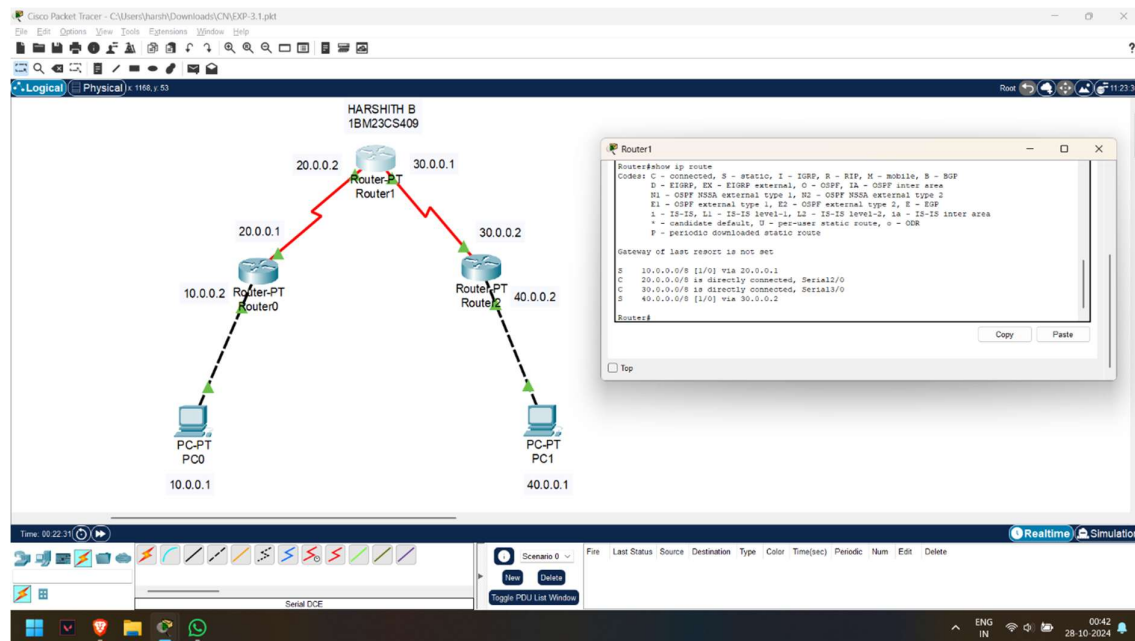

C 40.0.0.0/8 is directly connected, FastEthernet0/0
C 30.0.0.0/8 is directly connected, Serial 3/0
S* 0.0.0.0/8 [1/0] via 30.0.0.1

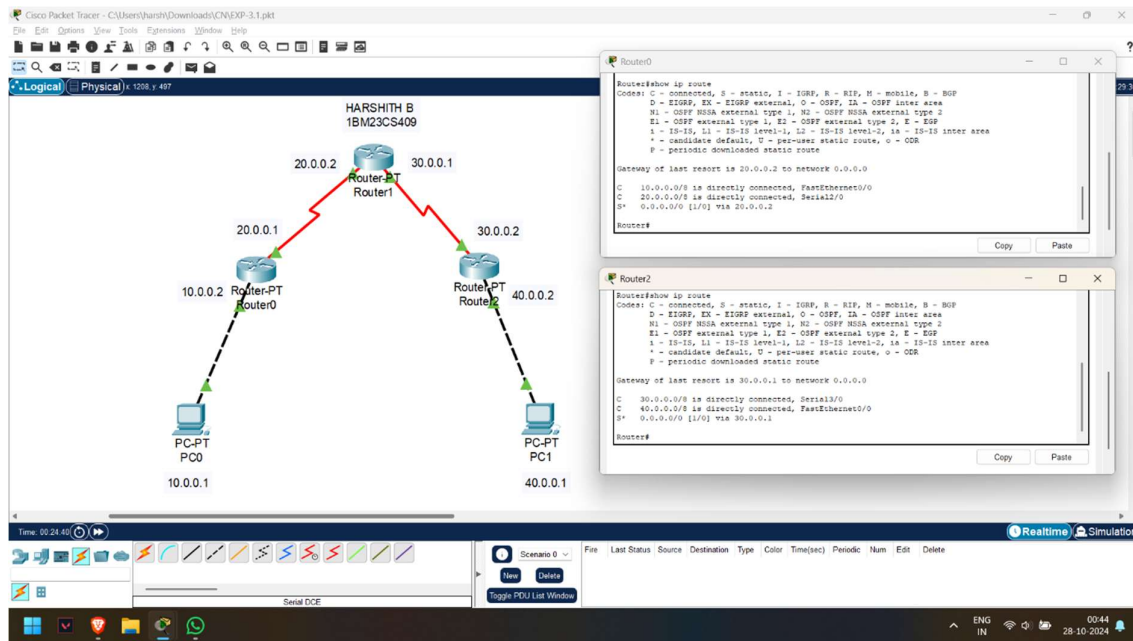

OUTPUT SNAPSHOTS:

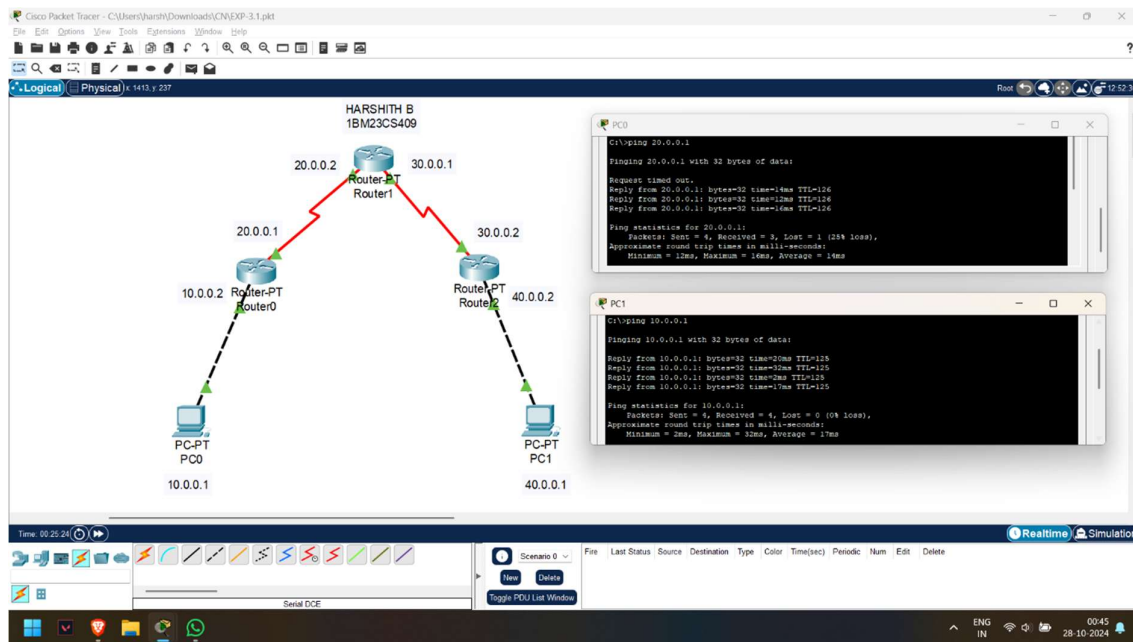

1. IP Route and Ping Test After Static Route to the Router

2. IP Route after Static Route to the Router

3. IP Route After Default Route to the Router

4. Ping Test after default route and static route configuration to the Router
